

TechCorro™[F] MMI Re-sealable corrosion preventive polythene bags

Details

These TechCorro™[F] MMI bags are designed to protect a range of metals from corrosion whilst in storage and/or transit. The 'write-on' panel allows the re-sealable bags to be annotated as appropriate.

Metals protected

Detailed information on protected metals and compatibility issues can be found in our 'compatibility charts' that are available from our web site or our sales office.

Method of providing protection

VCIs emit small amounts of harmless active corrosion inhibitors. They are attracted to the charged surface of the metal. The flow of electrons in the metal and the flow of ions in the electrolyte surface are unable to operate and corrosion is halted. The length of protection depends on many factors and Technology Packaging staff are available to answer specific questions on corrosion protection or to provide detailed, objective proposals on suitable methods. This is true whether the problem relates to new projects or existing problematic transit and/or storage systems.

Bag sizes

| Code | Open W (mm) | | Length(mm) | mu | Carton qty |
|------------|-------------|---|------------|-----|------------|
| 1061000083 | 100 | x | 150 | 100 | 1,000 |
| 1061000013 | 150 | x | 200 | 100 | 1,000 |
| 1061000085 | 200 | x | 250 | 100 | 1,000 |
| 1061000086 | 250 | x | 305 | 100 | 500 |
| 1061000087 | 305 | x | 450 | 100 | 500 |
| 1061000088 | 450 | x | 600 | 100 | 500 |

In addition to the above stocked items Technology Packaging will manufacture bags to a large range of sizes, colours and thicknesses.

Handling & Storage information

Ideally the material should be kept cool, dry and protected from direct sunlight. It is preferable to keep it in its original wrapping when possible. If kept in these conditions the material will be effective for a minimum of three years.

This information is based on existing knowledge and it is not binding. No legal claims can be derived from it
