

TechCorro™[F] films with Bright Idea Technology™

Details

Some people may think that all VCIs are the same they'd be wrong. Can your VCI supplier prove that there is VCI in their film? Well, we can.

ARMOR's Bright Idea Technology™ is proof positive. We are the only company in the UK with this bright idea. We are willing to literally shine a black light on our polyethylene products to prove the difference between films with and without VCI.

Our credibility is at stake but much more importantly, so is yours. What brand of corrosion protection do you want keeping your investment safe?

How to check

The pictures on the left provide an indication of how it works. Under normal lighting the films look very similar but shine a 'black' light on the films and straight away you will see that the TechCorro™[F] film is bright whilst the other film is dull. We will be happy to demonstrate for you.

Advantages - Benefits

- ✓ A convenient method to confirm VCI in packaging.
- ✓ Assures supply chain partners have incorporated VCI into products.
- ✓ Differentiate between similar looking films with and without VCI.
- ✓ Quality Assurance "quick check"

Other information

We will be pleased to supply our customers with a 'black' light source.

Product handling and storage

Ideally the material should be kept cool, dry and protected from direct sunlight. It is preferable to keep it in its original wrapping when possible. If kept in these conditions the materials will be effective for a minimum of three years.

Other types of corrosion preventive packaging products

In addition to a large range of different films, Technology Packaging provides VCI in papers, including reinforced types, boards, PE coated materials, chips, plastic, powders and a large number of special-purpose laminates. Skilled technicians are constantly reviewing and developing new products that are most often customer led.
